

## OUR QSE APPROACH

### Quality of service and safety are an integral part of our corporate culture

Autaa is strongly committed to a quality/ security approach for several years now, and risk prevention, safety in the work place, safeguarding health, respecting the environment and customer satisfaction underpin all our HSEQ commitments.

Our integrated system complies with the requirements of the following norms and standards:

- ISO 9001, 2015 version.
- MASE & U.I.C.
- QUALIMAT

### Customer satisfaction

AUTAA is also a customer-focused company. We aim to guarantee flawless quality of service for all our customers through:

- Dedicated contacts who are specialists in their specific areas.
- Regular meetings with our customers so that we can really listen to their needs.
- Quality customer support in the long-term.
- Study of lifting project execution.
- Preparation and planning operations with detailed progress monitoring, sound command of specific software for project management and team planning.
- Integration of QHSE issues in every operation.
- Feedback report.
- Optimizing costs.

### Quality, safety and reliability are our key words.

It is part of our everyday role to raise employee awareness and encourage them to adopt a proactive behavior when it comes to risks. To do so, we use a series of awareness-raising actions, including:

- Induction / on-the-job training.
- Vehicle audits / work site audits.
- Safety talks.
- Anomaly sheets giving rise to corrective or preventive actions.
- Safety communications: Safety flash, Professional manuals, Induction booklets, etc.
- Debrief after work sites and escalating customer information.

We constantly update and modernize our vehicle and equipment fleet which also contributes to guaranteeing the safety of our employees and the preservation of the environment.

### Qualification of personnel

Our employees' safety also implies that they receive the appropriate training as well as regular and targeted refresher courses.

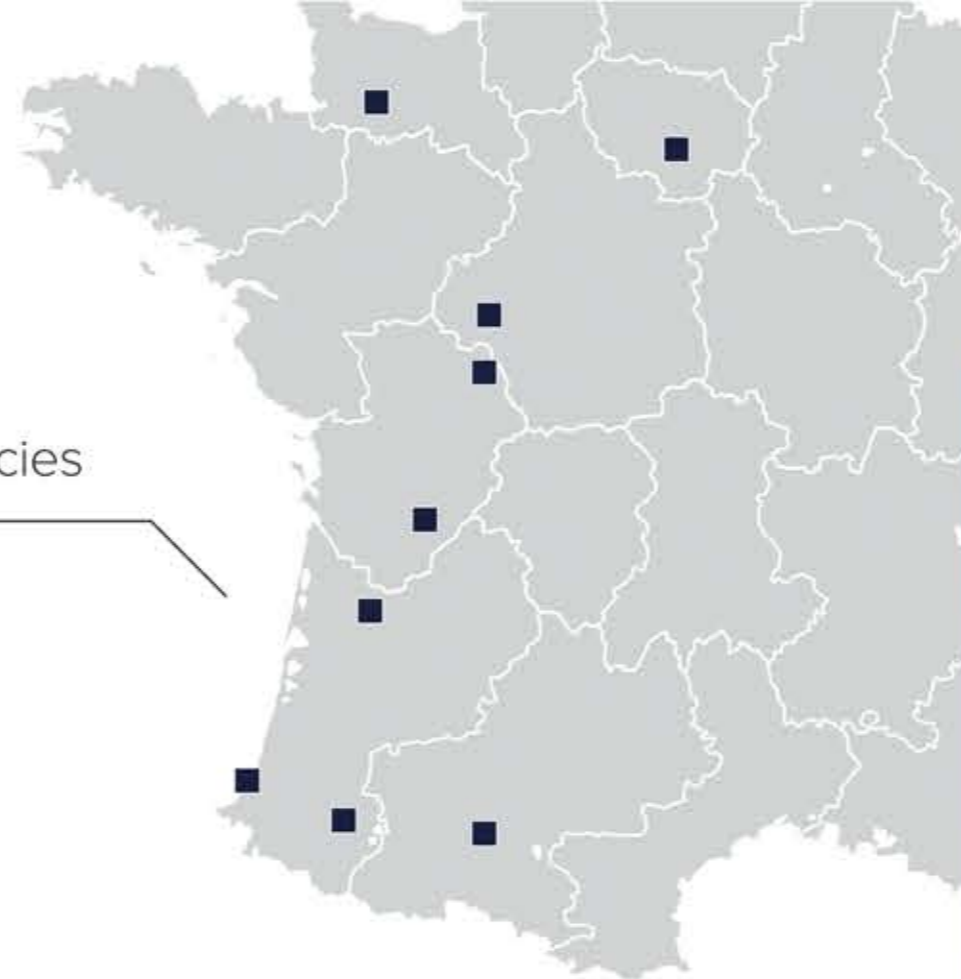

All our operational personnel have the training and qualifications required for their jobs: CACES (crane driving / warehouse workers) - FIMO/FCOS, APTH (truck drivers) and also safety-focused training (Qualification for chemical risks Level 1/Level 2) SST, AIPR, specific site training courses, ATEX), which means that **AUTAA is qualified to work on SEVESO-classified nuclear and chemical sites.**

## Quality on the road

WWW.AUTAA.FR

## OUR ACTIVITIES

Our company was created in 1964, and we offer specialist competencies both in France and abroad.

### OUR SERVICES ARE ORGANIZED INTO 5 COMPETENCY HUBS:

TRANSPORTATION  
LIFTING  
ELEVATING PERSONNEL  
INDUSTRIAL MACHINE HANDLING SERVICE  
WAREHOUSING AND LOGISTICS

### All types of road transportation

Our wide range of equipment and our fleet of carriers, tractor units and semi-trailers mean that we can provide solutions to all kinds of requests, from standard to very specific needs.

#### Standard (All goods for local/regional/national and European transportation)

6 m and 12 m flatbeds with or without side rails / Taut liner / Carriers up to 8x4, 25t capacity / Dumper trucks / Tanks for liquid foodstuffs (ANDRE SALLES affiliate) / Truck transporter and car transporter flatbeds (SBTA affiliate)

#### Exceptional (1st 2nd and 3rd category)

6x4 and 8x4 tractor units, capacity 180 T / Modular low flatbed semi-trailers for machine transportation / Extra-low flatbed semi-trailers, extendable up to 100T capacity and 55 m in length

#### Dangerous goods

(Class 2 - 3 - 4.1, 4.2, 4.3 - 5.1, 5.2 - 6.1, 6.2 - 8 and 9)

### All types of lifting operations

Our recent fleet of 90 mobile cranes from 35 to 750 tons, we can respond to all kinds of requests and work site configurations.

Our technical and commercial services are organized such that we can prepare and execute your operations in optimum conditions:

- Pre-site visit to assess specific risks, and to identify with you the equipment and machinery you need (accessibility, height, offset, load).
- Technical study and preparation of a lifting plan.
- Management of authorization requests and public highway permissions.
- Presence of a safety coordinator when required by the type of operation.

### All industrial transfer operations

Our fleet of 20, 15 to 100 t/m boom truck cranes on carrier trucks, our MEWPS (capacity up to 20t) and rollers adapted to loads of up to 48t enable us to respond to all the issues involved in your:

- Major plant shutdown operations.
- Transportation and delivery of modules and containers, creation of living quarters.
- Handling machine tools.
- Moving production tools.

### Standard and cold warehousing solutions

We have 20,000 m<sup>2</sup> of storage distributed among the different agencies, including 5,000 m<sup>2</sup> of controlled negative temperature store rooms. You can receive and store all types of goods and equipment so that you can organize delivery at a later date.

### All operations involving work at height require the use of a cherry picker

Our fleet of 6 high-reach cherry pickers (43 to 90 metres) on carriers or crawlers means that we can provide you with an efficient response to all your work-at-height needs (industrial sectors, local authorities and economic players).

Our range of different services when combined, provides a highly comprehensive service offer. We provide solutions in the Civil Engineering and construction, the oil and gas industry, the steel industry, telecommunications and wind energy sectors, where transportation, lifting and handling operations are required to execute works such as:

- Plant unit shutdowns for maintenance.
- Acceptance, transportation & delivery and installation of cooling units, air conditioning, VRV, AHU.
- Full removal of mobile drilling rigs including dismantling, transfer and reassembly.
- Dismantling, transfer and re-assembly of tower cranes.
- Assembly and installation of works of Art and wood or metal constructions such as roof structures, bridges and walkways.
- Removal of production tools from plants or small businesses including the transfer and installation of machines.
- Aeronautical maintenance on jumbo jets, emergency operations and transportation of full fuselage and/or turbojet engines.
- Creation and maintenance of telecom sites on top of buildings and/or dedicated pylons.
- Transfer, assembly and maintenance of wind turbines.
- Transportation, delivery and installation of pipelines and/or penstocks on ATEX sites or hydroelectric power stations.

We also carry out more routine operations: goods transportation in full-batch or half batch on regular lines throughout France and to Italy, Germany, Spain, Belgium and the Netherlands.

In 2018, Autaa purchased André SALLES transports in 2018 together with its tankers and dumper trucks for bulk transportation of liquids and solids, expanding the Group's diversification strategy and adding the transportation of foodstuffs to its range of activities.
